

## ACOI Medical Knowledge Pathway to Mastery Curriculum Common Presentations

The following have been selected as the common presentations for the medical knowledge curriculum. Programming associated with these presentations is intended to provide trainees with an opportunity to develop a systematic approach to problem solving and patient care.

Formats for developing and promoting systematic approaches to problem solving and patient care will be provided in the next iteration of the mastery curriculum. The format most appropriate for your available resources should be utilized. The conditions/presentations listed are referenced by the mastery curriculum in several places.

When completed, confirmation of programming designed to deliver this portion of the curriculum will be requested during the inspection process. Presentations by residents related to these common presentations may be used to meet the requirement for option 3 of scholarly activity projects.

<b>ACUTE CONDITIONS/PRESENTATIONS</b>	<b>CHRONIC CONDITIONS/PRESENTATIONS</b>	<b>NON-SPECIFIC CONDITIONS/PRESENTATIONS</b>
shortness of breath chest pain abdominal pain mental status change acid-base disorder electrolyte abnormalities oliguria dysrhythmia hypotension sepsis	heart failure hyperlipidemia hypertension COPD asthma diabetes mellitus type II anxiety/depression osteoporosis headache GERD low back pain chronic kidney disease chronic liver disease	fever fatigue weight loss anorexia delirium/stupor pain/myalgia lymphadenopathy
